# TERMA CONNECT PREMIUM

Unlock the full potential of your radar assets
Imagine always being up to date with the current operational state of all your SCANTER radar systems, even without necessarily having to be on-site. Terma Connect makes this possible.

Terma Connect is the digital service platform that provides the necessary insights to enable rapid reinstatement of degraded or failing systems. The platform monitors and provides analytics from all your radar assets to assist daily operations, schedule maintenance tasks and boost field service efficiency.

Features at a glance
The user friendly Terma Connect is accessible through a web browser and provides operators with various information valuable to daily operations. Dashboards provides a quick overview of the current (live data) status of each connected SCANTER radar system and gives the possibility to delve deeper into any radar to get detailed live information about the current status of the system. System generated events are used to warn the operators of current issues and recorded and live data are processed to identify trends that could potentially lead to system degradation or indicate forthcoming maintenance needs.

Other product highlights:
Service Management features allow maintenance planning and service reporting.
User Administration capabilities ensures that only authorized users gain access to features and data.
Security Hub provides user activity logging and auditing functionality.
Notification Engine allows configuration of push-notifications (E-mail, SMS or Terma Connect Pop-up) for system and user generated events to elevate the experience of active monitoring.
Advanced Reporting features allow offline representation of data trends and statistics.

Terma Connect is available in multiple variants that support all radars in the Terma SCANTER radar portfolio as well as various 3rd party sensors. Since it is an on-premise solution it operates perfectly well in a closed network (no Internet access required).

To arrange a Terma Connect demonstration, please contact support@terma.com.
